

## RENAL MULTIVITAMINS TAB

### *B-Complex with Vitamin C*

Our bodies do not produce vitamins or minerals, they have to be consumed in diet or as supplements. They can store some but not all vitamins for use when needed. Our bodies can store fat soluble vitamins (A, D, E and K) and needs water soluble vitamins like the B complex (except B12) and C to be replenished every day as they are excreted by Urine or by dialysis.

Dialysis status alters your body's ability to make vitamins such as Vitamin D. If you are following a "Renal diet," you may be missing out on essential vitamins. Remember, your body needs vitamins every day to function. The buildup of waste products (as occurs in kidney failure) alters your body's mechanism of handling vitamins. Dialysis makes your body lose vitamins.

### OUR MULTIVITAMINS TAB RENAL HELPS

- » Support healthy kidney function.
- » Support Kidney cleansing and Detoxification.
- » Provides body's daily vitamin needs.

### List of Ingredients

#### Each Tablet Contains Active Ingredients:

Vitamin B1 (Thiamine mononitrate) USP.....	1.3 mg
